

UAMS Center for Health Literacy

## Health Literacy: Plain and Inclusive Language

Jennifer Gan, MBA, CRS  
UAMS Center for Health Literacy  
Dept. Medical Humanities & Bioethics

1

### Learning objectives

- Describe the rationale for emphasis on clarity and inclusivity in research focused communication
- List some best practices for inclusive and clear research language
- Describe 3 principles of cultural humility

UAMS Center for Health Literacy

2

### Why we need clear communication in research

What happens if communication with research participants fails?

UAMS Center for Health Literacy

3

### Personal health literacy

The degree to which individuals have the ability to **find**, **understand**, and **use** information and services to inform health-related decisions and actions for themselves and others.

### Organizational health literacy

The degree to which organizations **equitably enable** individuals to find, understand, and use information and services to inform health-related decisions and actions for themselves and others.

U.S. DHHS, Office of Disease Prevention and Health Promotion: Healthy People 2030. <https://health.gov/our-work/healthy-people-2030/about/healthy-people-2030/health-literacy-healthy-people>

UAMS Center for Health Literacy

4

### Proficient health literacy requires many skills

Prose

Document

Quantitative

Oral

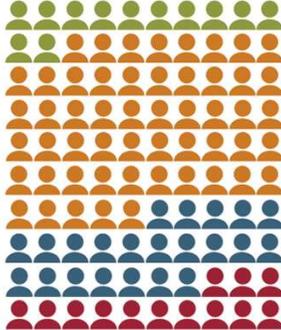

Digital

UAMS Center for Health Literacy

5

### US adults and health literacy

At each health literacy level, 2003

● Proficient  
● Intermediate  
● Basic  
● Below Basic

← About 35 out of 100: Basic/Below Basic

Source: National Assessment of Adult Literacy

UAMS Center for Health Literacy

6

### Groups at risk for poor health literacy

Advanced age      Minority race      Chronic disease status

Low education      Low income

Source: National Assessment of Adult Literacy

UAMS | Center for Health Literacy

7

### Limited health literacy is a hidden problem

- Context influences ability to learn
  - Stress
  - Pain
  - Feeling ill
- You cannot tell by looking at someone
  - Should treat everyone as if they may have difficulty understanding

UAMS | Center for Health Literacy

8

### Communication across the research study life cycle

1. DISCOVERY    2. RECRUITMENT    3. CONSENT    4. ON STUDY    5. END OF STUDY

MRCT MULTI-REGIONAL CLINICAL TRIALS  
THE MRCT CENTER OF BRIGHAM AND WOMEN'S HOSPITAL AND HARVARD

UAMS | Center for Health Literacy

9

### Informed consent

- Communication goal:
  - Understanding of responsibilities, risks, benefits...
  - Participant has accurate information to support decision-making
- Problems:
  - Too much information
  - Information not written in understandable terms
  - Process may not support confirming understanding

Source: <https://www.hhs.gov/ohrp/regulations-and-policy/guidance/for-informed-consent/index.html>

UAMS | Center for Health Literacy

10

### New Common Rule – key information

“Informed consent must begin with a **concise and focused presentation** of the key information that is most likely to assist a prospective subject or legally authorized representative in understanding the reasons **why one might or might not** want to participate in the research.”

82 Fed Reg 12 at p. 7265

UAMS | Center for Health Literacy

11

### Plain language informed consent form (ICF) navigator

Web-based utility to create plain language ICF

- IRB approved plain language ICF template
- Key information template
- New plain language HIPAA template

<https://healthliteracy.uams.edu/health-literacy-research/resources/>  
<https://irb.uams.edu/new-study-tools/>

UAMS | Center for Health Literacy

12

## During study

4. ON STUDY

Communication goals: What actions do you need participants to take while on your study?

- Problems:
  - Instructions may not be fully actionable
  - May result in inaccurate or unhelpful information
  - May result in frustration and dropout

13

## After study

5. END OF STUDY

- Communication goal:
  - Share outcomes with participants and communities
- Problems:
  - Spoken and written reports may not be in plain language and people may not speak up (may lead to lost opportunities for future study participants and support)

14

## After study

5. END OF STUDY

Practice activity: Explain your research to a potential donor in 2 minutes in “living room” language.

Plain language tip sheet for sharing your research summary with lay audiences

<https://healthliteracy.uams.edu/wp-content/uploads/sites/94/2019/10/Using-plain-language-to-share-your-research-summaries-with-lay-audiences.pdf>

15

## Solutions for improving clarity

across the research study life cycle

16

## Plain language

- Information people understand the first time they see or hear it
- Plain language is:
  - Readable (written only)  **Readable**
  - Understandable  **Understandable**
  - Actionable  **Actionable**
- Plain language is not “dumbing down”

17

## Avoid or define jargon

Instead of	Use
Ambulatory	Walk-in
Approximately	About
Hypertension	High blood pressure (?)
Implement	Begin or start
Medical condition	Health problem
Eligibility criteria	Who can join
Inform	Tell
Suffer from	Have
Provider	Doctor or nurse
Medication	Medicine
Sphenopalatine Ganglioneuralgia	“Brain freeze” or “ice cream headache”

18

## Organize content logically

- Share most important information first
- Keep like information together (use an outline)
- Use helpful headers
- Avoid using ALL CAPS
- Emphasize key messages (choose one method)
- Summarize action steps

UAMS | Center for Health Literacy

19

## Make it actionable with action steps

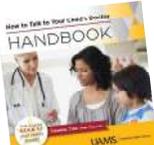

- Clearly identify action the participant needs to take
  - What
  - How much
  - When
- Provide step-by-step instructions to complete the action

UAMS | Center for Health Literacy

20

## Make it actionable with tools

- Activity logs
- Medication lists and dosing calendars
- Food journals
- Symptom diaries

Write down the info to take with you.

For a **well visit**, bring info about:

School (How they are doing in school—grades, learning, behavior)

Diet (What my child normally eats and any problems they have eating)

Activities my child does (sports, exercise, dance, etc.)

For a **sick visit**, use this table to list your child's symptoms.

What was the complaint?	When did the symptom start?	What did you try to treat this?	Did the treatment help?
(example) Cough	2 days ago	Cough medicine	Not coughing as much, but it hasn't gone.

If your child has had fever:  
How high did it get? \_\_\_\_\_ When did it start? \_\_\_\_\_

UAMS | Center for Health Literacy

21

## Use health numeracy best practices

- Avoid or explain calculations
- Simplify numbers
  - 91.2% (difficult)
  - 91 out of 100 (better)
  - About 9 out of 10 (best)
- Avoid relative risk statistics
  - ...your risk doubles...(accurate but misleading)
  - If you smoke: 2 out 100; If you do not smoke: 1 out of 100

UAMS | Center for Health Literacy

22

## How to promote inclusive communication

UAMS | Center for Health Literacy

23

## Cultural humility principles

- Lifelong learning and critical self-reflection
- Recognize and challenge power imbalances for respectful partnerships
- Institutional accountability – Working to develop mutually beneficial partnerships

Tervalon and Murray-Garcia in 1998 video:  
[https://www.youtube.com/watch?v=Mbu8bvKb\\_U&list=PL879555ABCCED8B50](https://www.youtube.com/watch?v=Mbu8bvKb_U&list=PL879555ABCCED8B50)

Tervalon M, Murray-Garcia J. Cultural humility versus cultural competence: a critical distinction in defining physician training outcomes in multicultural education. J Health Care Poor Underserved. 1998 May;9(2):117-25. doi: 10.1353/hpu.2010.0233. PMID: 10073197. UAMS | Center for Health Literacy

24

## Aim for inclusive language

- Use person-centered words rather than labels
  - "Person diagnosed with Down Syndrome" rather than "Downs person"
- Avoid victimizing words
  - "Person with muscular dystrophy" rather than "Person crippled by muscular dystrophy"
- Choose adjectives over nouns
  - "I met a transgender person" rather than "I met a transgender"
- Self-identification

<https://www.who.int/publications/i/item/9789241512459>

UAMS Center for Health Literacy

25

## Inclusive language: Race

- Capitalize Black and White, which is aligned with race and ethnic categories.
- Avoid using *brown* to characterize a specific racial or ethnic category.
- The word *minority*, on its own can be demeaning, vague, and imply lower social position.
  - Alternatives depending on context: racial/ethnic minority group, underrepresented group (be specific to the representation in the region), or people of color.

UAMS Center for Health Literacy

26

## Inclusive language: Gender

- Singular "they" is preferred over he/she
  - More inclusive
  - Easier to read
- Use personal pronouns
  - More inclusive and personal
  - Promotes action

UAMS Center for Health Literacy

27

## Inclusive language: Gender

- Avoid using "the opposite sex," (ignores the reality of a gender spectrum). Instead use "of a different gender."
- Avoid "guys" to refer to a mixed-gender group of people.
- Ask survey questions based on what you want to know (sex at birth vs current gender identity).
- Ask people what name they want to be called (use pronouns).

UAMS Center for Health Literacy

28

## Inclusive language: ability

Promotes that all bodies have value, and all people should be treated with dignity and respect.

Specific suggestions:

- Ask the preferred terminology.
  - For example, "blind" vs "person with low or limited loss of vision"
- Avoid stereotyping phrasing that equates "thin" or able-bodied" with health
- Remember that many chronic conditions and disabilities are invisible.

<https://s3-us-west-2.amazonaws.com/uw-s3-cdn/wp-content/uploads/sites/98/2020/04/20111848/UMAC-Equitable-Language-Guide-v.1.pdf>

UAMS Center for Health Literacy

29

## Strategies for addressing implicit bias

- Self awareness (know your bias)
- Exposure
- Individuation
- Perspective taking
- Counter-stereotyping
- Reducing stress, getting sleep, complex cognitive encounters can trigger reliance on bias

### Online templates and resources

- Plain language Informed consent form template
- Plain language HIPAA form template
- Tips for plain language presentations  
<https://healthliteracy.uams.edu/health-literacy-research/resources/>
- Key information template  
<https://irb.uams.edu/new-study-tools/>
- In development: Informed consent form navigator  
Contact us for more information
- Plain language tips for research teams  
<https://mrctcenter.org/health-literacy/>

31

### October Health Literacy Month

- Take the Plain Pledge
- Join us:
  - Plain language training for research  
January 2022 (email)
  - Interprofessional Education Plain Language Competence Workshop  
September 24, 2021
  - Interprofessional Education Quadruple Aim Project  
October 8, 2021

32

### Plain language assessment, editing

Offered by UAMS Center for Health Literacy

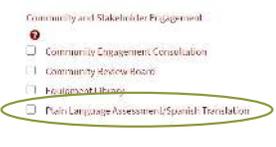

- Recruitment materials (flyers, scripts), informed consent documents, other instructions or education
- Assessment and editing for improved readability, understandability, actionability
- Support from TRI for small projects
- Request through TRI Request Services portal

33

### How to request CHL services through TRI portal

- Visit the TRI Services Request portal:  
<https://tri.uams.edu/request-services-2/>
- Select "Plain Language Assessment/Spanish translation"

34

### Other UAMS CHL services

- Field testing, new materials development (English, Spanish)
- Contact us for inclusion in proposal budgets

35
